msehrgosha@nexwave-solutions.com**NEXWAVE AND BMR FORM STRATEGIC PARTNERSHIP FOR CHINESE
CONSUMER ELECTRONICS MARKET**

PLEASANTON, CALIFORNIA (USA) and BEIJING, CHINA July 14, 2006 — NexWave Inc. and Beijing Microtec Research Tech Corp. (BMR) have recently signed a strategic agreement to initiate their marketing efforts in the Chinese digital electronic market. This partnership is focused on serving an increasing need of the Chinese manufacturers for managing and expanding the embedded software for consumer devices. The market focus for this new component-based software technology is digital consumer electronic products such as set-top boxes, Digital Televisions (DTV), DVDs, PVRs, media players, digital cameras, camcorders and mobile devices.

During the signing of this agreement, Mr. Mazy Sehrgosha, NexWave's Senior Vice-President of Sales, Marketing and Business Development commented: "As the migration to digital devices accelerates, so does the complexity of embedded software development and maintenance. NexWave's unique software component technology allows consumer electronic manufacturers to reduce their software development time and investment and improve their time to market while preserving the previous investments in legacy code development." He continued: " We are very pleased to bring such a unique and innovative new technology to Chinese partners and customers."

Mr. Allan He, CEO of BMR in China said: "We are very excited about NexWave's new software technology as it addresses a major need in the Chinese embedded software development community. NexWave's unique software component technology allows consumer electronic manufacturers to re-use their embedded software from various products and platforms by various semiconductor vendors, independently of hardware and/or operating system—this is extremely important and valuable as our customers continue to look for ways to cut cost, introduce more new products and meet the demand of Time To Market."

About BMR

Founded in 1994, BMR is the first embedded software company in China. BMR has currently 500 existing customers on the Chinese embedded software market. A large geographical coverage is insured with the HQ located in Beijing and 4 sales and support organizations located in Beijing, Shanghai, Shenzhen and Chengdu.

ABOUT NexWave

NexWave was founded in 1998 by a small team of software engineers with a shared vision on how to change the future of embedded and device software development in the Consumer Electronics marketplace. Together, they inaugurated an ambitious technological advance to address many of the growing challenges that face the embedded device software world. NexWave's key to success lies not only in our component-based software technology, but also in our company values. Our primary focus is "Customer First": helping customers reaching their objectives while reducing their development costs and time to market. NSI (NexWave Software Infrastructure) is the first component architecture that is totally adapted to the embedded software industry.

NSI is primarily about permitting reuse of code across different product populations. For example, a component written for a DVD player can be seamlessly and easily reused in a set-top box. As reusable components are created and added to the population, greater component reuse is facilitated across different projects, and developers witness increasing returns.
